

PRESENTER

P R O F E S S I O N A L

3D Illustration and Visualization for You!

What is Presenter Professional? The most advanced 3D illustration, rendering, and animation program available for the Macintosh today.

Who can use it? Design professionals in the presentation, prepress, and multimedia field who have experience with 2D illustration and design, and are ready for the third dimension.

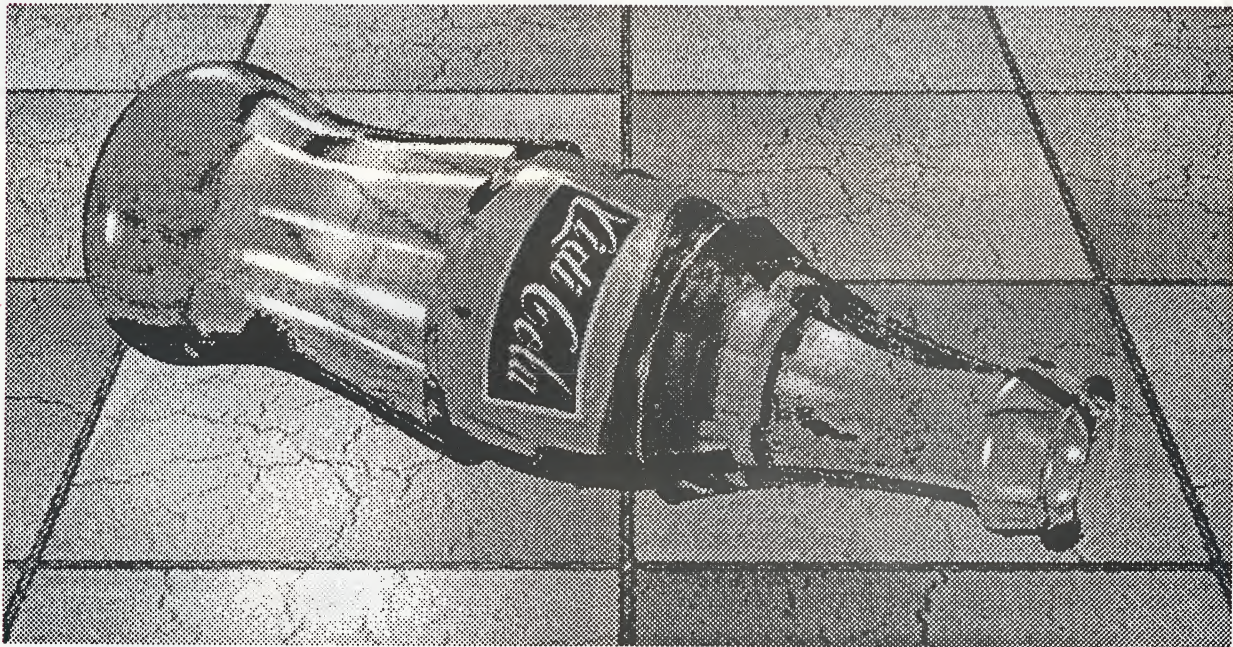

Why? Because Presenter Professional has what it takes to get the 3D visualization job done. It:

- Offers a complete 3D modeling, rendering, ray tracing, and animation solution all in one package, with the best RenderMan™ interface on the market.
- Transforms 2D Postscript fonts & line art into dazzling 3D images and animations.
- Provides a 3D modeling interface as intuitive as FreeHand™ or Illustrator™.
- Delivers Digital Clay™ surface sculpting, additive modeling, and constructive design.
- Features flexibility with a Novice Mode for the beginner as well as an Expert Mode.

How Do Other 3D Products Compare Against Presenter Professional???

- They can do simple polygonal design, but not 3D illustration & freeform sculpting!
- They can do simple camera animation, but not full object movement!
- They can render simple objects, but not freeform, sculpted surfaces!

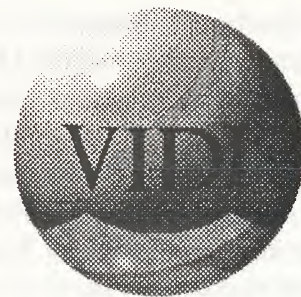

And they can't put it all together to model, ray trace, and animate as well as Presenter Professional can!

Presenter Professional goes beyond simple 3D modeling, imaging, and animation.

It offers **3D Illustration** with:

- ✓ Freeform, 3D Sculpting
- ✓ Professional Animation
- ✓ Photorealistic Ray Tracing
- ✓ Postscript Fonts & Line Art
- ✓ MacRenderMan Interface
- ✓ RISC Speed Upgrade
